

MACHINE LEARNING

What is machine learning?

Machine learning is the subfield of computer science that gives **“computers the ability to learn without being explicitly programmed.”**

How machine learning works?

Major machine learning techniques

- Regression/Estimation
 - Predicting continuous values
- Classification
 - Predicting the item class/category of a case
- Clustering
 - Finding the structure of data; summarization
- Associations
 - Associating frequent co-occurring items/events

Major machine learning techniques

- **Anomaly detection**
 - Discovering abnormal and unusual cases
- **Sequence mining**
 - Predicting next events; click-stream (Markov Model, HMM)
- **Dimension Reduction**
 - Reducing the size of data (PCA)
- **Recommendation systems**
 - Recommending items

SUPERVISED VS UNSUPERVISED LEARNING

MACHINE
LEARNING

"Data Science & AI"
Siva Prisha

Supervised vs unsupervised learning

Supervised Learning

- **Classification:**
Classifies labeled data
- **Regression:**
Predicts trends using previous labeled data
- Has more evaluation methods than unsupervised learning
- Controlled environment

Unsupervised Learning

- **Clustering:**
Finds patterns and groupings from unlabeled data
- Has fewer evaluation methods than supervised learning
- Less controlled environment

What is classification?

Classification is the process of predicting discrete class labels or categories.

ID	Clump	UnifSize	UnifShape	MargAdh	SingEpiSize	BareNuc	BlandChrom	NormNucI	Mit	Class
1000025	5	1	1	1	2	1	3	1	1	benign
1002945	5	4	4	5	7	10	3	2	1	benign
1015425	3	1	1	1	2	2	3	1	1	malignant
1016277	6	8	8	1	3	4	3	7	1	benign
1017023	4	1	1	3	2	1	3	1	1	benign
1017122	8	10	10	8	7	10		7	1	malignant
1018099	1	1	1	1	2	10	3	1	1	benign
1018561	2	1	2	H	2	1	3	1	1	benign
1033078	2	1	1	1	2	1	1	1	5	benign
1033078	4	2	1	1	2	1	2	1	1	benien

Categorical Values

What is regression?

Regression is the process of predicting continuous values.

	ENGINE SIZE	CYLINDERS	FUEL CONSUMPTION, COMB	CO2 EMISSIONS
0	2.0	4	8.5	196
1	2.4	4	9.6	221
2	1.8	4	5.9	136
3	3.5	6	11.1	255
4	3.5	6	10.6	244
5	3.5	6	10.0	230
6	3.5	6	10.1	232
7	3.7	6	11.1	255
8	3.7	6	11.6	267
9	2.4	4	9.2	?

Continuous Values

What is clustering?

Clustering is grouping of data points or objects that are somehow similar by:

- Discovering structure
- Summarization
- Anomaly detection

Python libraries for machine learning

pandas

$$y_i = \beta' x_{it} + \mu_i + \epsilon_{it}$$

NumPy

SciPy

matplotlib

- Scikit-learn is a library containing many machine learning algorithms.
- It utilizes a generalized “estimator API” framework to calling the models.
- This means the way algorithms are imported, fitted, and used is uniform across all algorithms.
- Scikit-learn also comes with many convenience tools, including train test split functions, cross validation tools, and a variety of reporting metric functions.
- This leaves Scikit-Learn as a “one-stop shop” for many of our machine learning needs.
- Scikit-Learn’s approach to model building focuses on **applying models** and **performance metrics**.

More about scikit-learn

- Free software machine learning library
- Classification, Regression and Clustering algorithms
- Works with NumPy and SciPy
- Great documentation
- Easy to implement

scikit-learn functions

```
from sklearn import preprocessing  
X = preprocessing.StandardScaler().fit(X).transform(X)
```

```
from sklearn.model_selection import train_test_split  
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.33)
```

```
from sklearn import svm  
clf = svm.SVC(gamma=0.001, C=100.)
```

```
clf.fit(X_train, y_train)
```

```
clf.predict(X_test)
```

```
from sklearn.metrics import confusion_matrix  
print(confusion_matrix(y_test, yhat, labels=[1,0]))
```

```
import pickle  
s = pickle.dumps(clf)
```
